SUMMARY

Computer Engineering student with a strong interest in Artificial Intelligence, Machine Learning, Computer Vision, and Python development. Hands-on experience through academic and personal projects involving YOLOv8, Convolutional Neural Networks, Transfer Learning, and LLM-based resume analysis. Currently developing a deep-learning-based runway detection and localization system for aerial imagery, with an interest in practical AI engineering and intelligent software solutions.

EDUCATION

International School of Business and Media, Pune [COE] | SPPU

Bachelor of Engineering — Computer Engineering, CGPA: 6.5/10 — 6th Semester

4th Year, 7th Semester

Higher Secondary Certificate (HSC), 76.50%

Secondary School Certificate (SSC), 90%

PROJECTS

Runway Detection and Localization Using Deep Learning | Final Year Project | Team of 4 | In Development

- Developing a system to automatically detect and localize runways from aerial and terrain imagery using Deep Learning.
- Exploring YOLOv8, Convolutional Neural Networks (CNN), and Transfer Learning for runway detection and localization.
- Investigating applications in UAV/drone navigation and automated landing scenarios.
- Researching and evaluating open-source datasets including LARD (Landing Approach Runway Detection Dataset) and aerial imagery sources.
- Contributing across research, dataset acquisition, technical exploration, presentation, and overall project development.

Resume Parser & Analyzer | Personal AI/ML Learning Project

- Developed an experimental AI-based system that analyzes a candidate's resume against a given job description.
- Extracts relevant candidate information including skills, education, and experience for analysis.
- Compares candidate qualifications with job requirements and generates a job-fit verdict and percentage match.
- Built using Python and gpt-oss-120b, with development and testing in VS Code.
- Created as a practical project to apply LLM and AI concepts to an AI Engineer-oriented recruitment use case.

TECHNICAL SKILLS

Programming: Python, Java, C++

Web Technologies: HTML, CSS, JavaScript

Database: MySQL

AI/ML: Machine Learning Fundamentals, Deep Learning Fundamentals, CNN, Transfer Learning, YOLOv8

Tools & Platforms: VS Code, Power BI, Vercel, Google AI Studio

CERTIFICATIONS

Solutions Architecture Job Simulation — AWS | Certificate of Completion | Forage

CAREER INTERESTS

Artificial Intelligence & Machine Learning | Computer Vision | Python Development | Backend Development |
Software Development | Data Science
